■ **DVD video disc glossary**

● DVD video discs: Digital Versatile Discs that holds world's standard video. DVD video discs have adopted "MPEG2", one of the world standards of digital compression technologies. The picture data is compressed by 1/40 on average and stored. Variable rate encoded technology has been adopted in which the volume of data assigned to the picture is changed depending on the picture format. Audio data is stored using PCM and Dolby digital, which enables higher sound. Furthermore, multi-angle and multi-language features will also help you enjoy the more advanced technology of DVD video.

● Viewer restrictions: This feature limits what can be viewed in conformity with the level of restrictions of the country. The level of restrictions varies depending on the DVD video disc. Some DVD video discs cannot be played at all, or violent scenes are skipped or replaced with other scenes.

• Level 1: DVD video discs for children can be played.
• Level 2 - 7: DVD video discs for children and G-rated movies can be played.
• Level 8: All types of DVD video discs can be played.

● Multi-angle feature: Allows you to enjoy the same scene at different angles.

● Multi-language feature: Allows you to select the language of the subtitles and audio.

● Region codes: Region codes are provided on DVD players and DVD discs. If the DVD video disc does not have the same region code as the DVD player, you cannot play the disc on the DVD player.

● Audio: This DVD player can play liner PCM, Dolby digital, dts and MPEG audio format DVD. Other decoded type cannot be played.

● Title and chapter: Video and audio programs stored on DVD video discs are divided into sections by title and chapter.

● Title: The largest unit of the video and audio programs stored on DVD video discs. Usually, one piece of a movie, one album, or one audio program is assigned as a title.

● Chapter: A unit smaller than a title. A title comprises multiple chapters.
